

97 AD

Scientists have found what is apparently the earliest dental implant: a wrought-iron tooth in a man who lived about 1,900 yrs ago in what is now known as France.

X Rays showed a perfect fit in the tooth socket in the upper right jaw. The false tooth was apparently jammed into place more than a year before the man

did. The discovery was made in a
Gallo-Roman cemetery south of Paris
by French researchers in 1997. At time of
the dental work France was ruled by
Romans and called Gaul.

Nerva adopts Trajan
as successor.

middle 1797

the military unrest came to a head. The praetorian guard broke into open mutiny. CASPERIUS AELIANUS, Commander of the guard, imprisoned NERVA in the imperial palace demanding the surrender of PETRONIUS and PARTIENIUS.

Nerva resisted these demands with great personal courage, having

his own throat to the soldier. His
brave gesture was in vain for he was
helpless to stop the praetorians from
seizing their victims. Petronius had
the more merciful end. He was killed
by a single sword blow. Perthenius
had his genitals torn off and thrust into
his mouth before his throat was cut.

Nerva was unhurt in this
assault but his authority was
damaged beyond repair.

Trojan did not hurry back to the Capitol to restore Anthony after the mutiny of the praetorian guard under Cassius Rebellus. Instead, he merely sent for the leaders of the mutiny, on the pretext of handing them a special commission. When they arrived at his headquarters in Germany he had them executed.

Nerva made Tacitus Consul
And

next

Trayan appointed him
proconsul of Asia

27 OCT 97

Adoption of M. ULPUS TRAIANUS
(Trajan) by NERVA

When Trajan, then on the Rhine, was adopted by the emperor Nerva, Hadrian was chosen to convey the army's congratulations to the new imperial heir.
